AVALANCHE WARNING BULLETIN

Valid from 22-03-2018 (1700 h) to 23-03-2018 (1700 h)

S. No.	District	Danger Level	Alt Range (m)
A. Jammu Division			
1	Poonch	1	
2	Rajouri	1	
3	Reasi	1	
4	Ramban	1	
5	Doda	1	
6	Kishtwar	1	
7	Udhampur	1	
B. Kashmir Division			
1	Anantnag	1	
2	Kulgam	1	
3	Badgam	1	
4	Baramulla	1	
5	Kupwara	1	
6	Bandipora	1	
7	Ganderbal	1	

S. No.	District	Danger Level	Alt Range (m)
C. Laddakh Division			
1	Kargil	1	
2	Leh	1	
D. Himachal Pradesh			
1	Chamba	2 (Yellow)	
2	Lahaul-Spiti	2 (Yellow)	
3	Kullu	2 (Yellow)	
4	Kinnaur	1	
5	Shimla	1	
E. Uttarakhand			
1	Uttarkashi	2 (Yellow)	
2	Chamoli	2 (Yellow)	
3	Rudraprayag	1	
4	Pithoragarh	1	
5	Dehra Garhwal	1	

Outlook/Note:

[Signature]
Division Head
For Director

Danger Level	Degree of Danger	Description
1	UNLIKELY	Generally safe conditions. Snowpack on slopes, if any, is generally stable with isolated instability. Movement is generally safe. Rare avalanche activity is possible with high external loading e.g. humans, explosives or movement in formation zones.
2	LOW	Partly unsafe conditions. Small size triggering is possible on few extreme slopes. Valley movements are generally safe. Movement on slopes with care.
3	MEDIUM	Unsafe conditions. Triggering is possible from the most avalanche prone slope and may reach the valley in medium size. Avoid movement on slopes. Routes should be selected with care. Valley movement with precaution. Evacuate from unprotected settlements or near the avalanche paths.
4	HIGH	Highly unsafe condition. Triggering is possible from all avalanche prone slope and may reach the valley in large size. Suspend all movements. Airborne avalanches likely. Evacuate from all settlements or near the avalanche paths.
5	ALSO BOUND	Extremely unsafe condition. Numerous large avalanches are likely from all possible avalanche slopes even on moderately steep terrain. Airborne avalanche likely and may follow unexpected paths. Evacuate from avalanche prone areas.

Disclaimer: - Above information warning bulletin is provided after analyzing the current instability state of snowpack, current snow and melt data from the field sensors and projected weather from models. It is our endeavour to assess the instability state as accurately as possible and draw a precise avalanche forecast. However, precaution must be observed during all movements irrespective of the level of danger predicted as snow and weather conditions in mountain may vary rapidly in space and time.
